

# RZB ENERGY

## CHARGING TRUNKING

### Why was the product developed?

**From chaos to structure:** integrated system instead of uncoordinated individual solutions in multi-storey and underground car parks

**Preparation and flexible design:** time and cost saving due to modular scalability

### Which problems are solved by the product?

**Reduced investment risk:** needs-based extension instead of expensive complete installation in advance

**Low retrofit threshold:** simple installation of additional charge points without basic cabling and large construction site due to modularity

### Product benefits

- + **Legally watertight:** invoicing compliant with calibration regulations – also in the charging network
- + **Flexible:** plug-and-play retrofitting of charging units tailored to requirements
- + **Durable:** robust infrastructure channel protects technology and cables against environmental impacts and vandalism
- + **GEIG-compliant:** preliminary setup of the cable infrastructure in accordance with national building electric mobility infrastructure laws.
