

Refurbishment frames

Overview

round

square

REFURBISHMENT FRAMES

Why was the product developed?

Legal requirements: refurbishment requirement, particularly due to EU-wide ban on fluorescent lamps

Practical obstacles: refurbishment of downlights often correlates with ceiling cut-outs that are overdimensioned for modern LED luminaires

Which problems are solved by the luminaire?

Stress-free accuracy of fit: bridges existing ceiling cut-outs for the selected recessed luminaire, which are up to 5 cm too big

High installation convenience: fast, tool-free adjustment to respective LED downlight size

Product benefits

- + **Simply fast:** tool-free installation, stable attachment of the frame separate to the luminaire
- + **Highly flexible:** comprehensive standard range (round / square) as well as special solutions possible
- + **Aesthetic:** appealing look
