

Emergency luminaire

SURANO

Why was the product developed?

Gap closure: emergency luminaire for an escape route, which does not end at the building's door, but safely leads to the assembly point outdoors

Resistance to the elements: reliable lighting, which does not even fail in extreme conditions

Which problems are solved by the luminaire?

Outdoor hazard zone: eliminates dangerous trip hazards and disorientation outdoors

Complex systems: ends the compatibility dilemma with universal usability for central and single battery supply as well as different monitoring systems

Product benefits

- + **Cold profile:** full function up to -20°C – completely without battery heating
- + **Indestructible:** high-quality aluminium die cast housing with extreme IP 66 type of protection
- + **Repairable:** fully replaceable components
- + **Adaptable:** two characteristics, two colours and option for MULTIDIGIT air
- + **Maximum application range for the emergency light supply:** Surano is available for the central emergency power supply or - with discontinued emergency light electronics - also as single battery version. The "Frosty" version (integrated battery) operates even under demanding climatic conditions.
